SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	02/27/2007	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

<b>Office Action Summary</b>	<b>Application No.</b>		<b>Applicant(s)</b>	
	10/700,911		PRAKASH, VIPUL VED	
	<b>Examiner</b>		<b>Art Unit</b>	
	LaShonda T. Jacobs		2157	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 03 November 2003.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-16 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-16 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 03 November 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### **DETAILED ACTION**

This Office Action is responsive to Applicant's Application filed on November 3, 2003.

Claims 1-18 are pending.

#### ***Claim Objections***

1. Claims 13-18 are objected to because of the following informalities: Claims 13-18 lacks antecedent basis according to the specification. Claims 13-18 recites a "computer-readable medium" and the specification recites "recordable type media". Appropriate correction is required.

#### ***Claim Rejections - 35 USC § 101***

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 13-18 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 13-18 lacks or not limited to (based on intrinsic evidence on page 15, paragraph 0037, lines 8-19 of Applicant's specification) physical articles or objects which are structurally and functionally interconnected to the code in such a manner or to establish a statutory category of invention and enable the code to act as a computer component and realize its functionality.

*Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nielsen (U.S. Pat. No.6,453,327) in view of Rounthwaite et al (hereinafter, "Rounthwaite", U.S. Pub. No. 2004/0177110).

As per claim 1, Nielsen discloses a method, comprising:

- receiving a plurality of reports from a community of users (col. 7, lines 62-67; Nielsen discloses receiving a junk mail reports from a members within a trusted group), each report identifying an email message as spam or not spam (col. 7, lines 47-63; Nielsen discloses a each member of the trusted group receiving a putative junk mail message and sending a junk mail report that classifies the message as junk e-mail); and
- determining if the email message is spam based on a number of the reports received from the community of users (col. 9, lines 20-35 and col. 13, lines 6-16; Nielsen discloses a trusted group server which maintains records of information relating to putative and junk mail. If the value of the number of trusted group reporting field exceeds a specified value the putative junk mail is considered to be junk mail).

Art Unit: 2157

Although, Nielsen discloses members of a trusted group sending junk mail reports to a trusted server. However, Nielsen does not explicitly disclose:

- a trust factor associated with each user.

Rounthwaite discloses a feedback loop for spam prevention system and method tat facilitate classifying items in connection with spam prevention in server and/or client based architectures comprising:

- a trust factor associated with each user (paragraph 0035, lines 1-9 and paragraph 0085; Rounthwaite discloses a trust level for each user to determine the user trustworthiness when classifying messages as spam or not).

Therefore, it would have been obvious to one of ordinary skill in the art at the time was made to modify Nielsen by incorporating or implementing a trust level for each trusted in member within the trusted group in order to determine the user trustworthiness for the purpose of classifying email message for spam prevention.

As per claim 2, Nielsen further discloses:

- maintaining a database of email messages determined as being spam (col. 9, lines 8-35; Nielsen discloses maintaining databases in the trusted user's client computer and in the trusted group's server relating to junk e-mail).

As per claim 3, Nielsen further discloses:

- providing notifications to the community of users of email messages stored in the database and determined as being spam (col. 7, lines 50-67, col. 8, lines 1-3 and col. 13, lines 6-16; Nielsen discloses sending junk mail warning messages to the members in the trusted group regarding messages in the database that are considered to be junk mail).

Art Unit: 2157

As per claim 4, Nielsen discloses:

- wherein each notification is in response to a request received from a user in the community for an indication on whether an identified message is spam (col. 7, lines 7, lines 50-67, col. 8, lines 1-3 and col. 13, lines 6-16; Nielsen discloses receiving junk mail report from members within a trusted group in which the report indicates if a message is spam. After determining if the message is spam, the trusted group server sends a junk mail warning messages to the members in the trusted group regarding messages in the database that are considered to be junk mail).

As per claim 5, Nielsen discloses:

- wherein each report comprises at least one signature based on a content of the email message (col. 11, lines 61-67, col. 12, lines 37-45 and col. 13, lines 38-58; Nielsen discloses a trusted group server receiving a junk mail report from members in the trusted group in which the server determines if the digital signature in the message can be authenticated if not then the message is discarded).

As per claim 6, Nielsen discloses the claimed invention substantially as claims discussed above.

However, Nielsen does not explicitly disclose:

- wherein the trust factor is based on an indication of how accurately previous reports sent by the user identified email messages as spam.

Art Unit: 2157

Rounthwaite discloses a feedback loop for spam prevention system and method tat facilitate classifying items in connection with spam prevention in server and/or client based architectures comprising:

- wherein the trust factor is based on an indication of how accurately previous reports sent by the user identified email messages as spam (paragraph 0035, lines 1-9 and paragraph 0085; Rounthwaite discloses a trust level for each user to determine the user trustworthiness when classifying messages as spam or not based on analyzing the number of contradictions, the number of changed minds, etc.).

Therefore, it would have been obvious to one of ordinary skill in the art at the time was made to modify Nielsen by incorporating or implementing a trust level for each trusted in member within the trusted group in order to determine the user trustworthiness for the purpose of classifying email message for spam prevention.

As per claim 7, Nielsen discloses a server, comprising:

- a processor (col. 7, lines 4-7); and
- a memory coupled to the processor, the memory storing instructions which when executed by the processor cause the processor to perform a method (col. 7, lines 4-17), comprising:
  - receiving a plurality of reports from a community of users (col. 7, lines 62-67; Nielsen discloses receiving a junk mail reports from a members within a trusted group), each report identifying an email message as spam or not spam (col. 7, lines 47-63; Nielsen discloses a each member of the trusted group receiving a

Art Unit: 2157

putative junk mail message and sending a junk mail report that classifies the message as junk e-mail); and

- determining if the email message is spam based on a number of the reports received from the community of users(col. 9, lines 20-35 and col. 13, lines 6-16; Nielsen discloses a trusted group server which maintains records of information relating to putative and junk mail. If the value of the number of trusted group reporting field exceeds a specified value the putative junk mail is considered to be junk mail).

Although, Nielsen discloses members of a trusted group sending junk mail reports to a trusted server. However, Nielsen does not explicitly disclose:

- a trust factor associated with each user.

Rounthwaite discloses a feedback loop for spam prevention system and method tat facilitate classifying items in connection with spam prevention in server and/or client based architectures comprising:

- a trust factor associated with each user (paragraph 0035, lines 1-9 and paragraph 0085; Rounthwaite discloses a trust level for each user to determine the user trustworthiness when classifying messages as spam or not).

Therefore, it would have been obvious to one of ordinary skill in the art at the time was made to modify Nielsen by incorporating or implementing a trust level for each trusted in member within the trusted group in order to determine the user trustworthiness for the purpose of classifying email message for spam prevention.

As per claim 8, Nielsen discloses:

- wherein the method further comprises maintaining a database of email messages determined as being spam (col. 9, lines 8-35; Nielsen discloses maintaining databases in the trusted user's client computer and in the trusted group's server relating to junk e-mail).

As per claim 9, Nielsen further discloses:

- providing notifications to the community of users of email messages stored in the database and determined as being spam (col. 7, lines 50-67, col. 8, lines 1-3 and col. 13, lines 6-16; Nielsen discloses sending junk mail warning messages to the members in the trusted group regarding messages in the database that are considered to be junk mail).

As per claim 10, Nielsen discloses:

- wherein each notification is in response to a request received from a user in the community for an indication on whether an identified message is spam (col. 7, lines 7, lines 50-67, col. 8, lines 1-3 and col. 13, lines 6-16; Nielsen discloses receiving junk mail report from members within a trusted group in which the report indicates if a message is spam. After determining if the message is spam, the trusted group server sends a junk mail warning messages to the members in the trusted group regarding messages in the database that are considered to be junk mail).

As per claim 11, Nielsen disclose:

- wherein each report comprises at least one signature based on a content of the email message (col. 11, lines 61-67, col. 12, lines 37-45 and col. 13, lines 38-58; Nielsen discloses a trusted group server receiving a junk mail report from

members in the trusted group in which the server determines if the digital signature in the message can be authenticated if not then the message is discarded).

As per claim 12, Nielsen discloses the claimed invention substantially as claims discussed above.

However, Nielsen does not explicitly disclose:

- wherein the trust factor is based on an indication of how accurately previous reports sent by the user identified email messages as spam.

Rounthwaite discloses a feedback loop for spam prevention system and method tat facilitate classifying items in connection with spam prevention in server and/or client based architectures comprising:

- wherein the trust factor is based on an indication of how accurately previous reports sent by the user identified email messages as spam (paragraph 0035, lines 1-9 and paragraph 0085; Rounthwaite discloses a trust level for each user to determine the user trustworthiness when classifying messages as spam or not based on analyzing the number of contradictions, the number of changed minds, etc.).

Therefore, it would have been obvious to one of ordinary skill in the art at the time was made to modify Nielsen by incorporating or implementing a trust level for each trusted in member within the trusted group in order to determine the user trustworthiness for the purpose of classifying email message for spam prevention.

Art Unit: 2157

As per claim 13, Nielsen discloses a computer-readable medium having stored thereon a sequence of instructions which when executed by a computer, cause the computer to perform a method comprising:

- receiving a plurality of reports from a community of users (col. 7, lines 62-67; Nielsen discloses receiving a junk mail reports from a members within a trusted group), each report identifying an email message as spam or not spam (col. 7, lines 47-63; Nielsen discloses a each member of the trusted group receiving a putative junk mail message and sending a junk mail report that classifies the message as junk e-mail); and
- determining if the email message is spam based on a number of the reports received from the community of users(col. 9, lines 20-35 and col. 13, lines 6-16; Nielsen discloses a trusted group server which maintains records of information relating to putative and junk mail. If the value of the number of trusted group reporting field exceeds a specified value the putative junk mail is considered to be junk mail).

Although, Nielsen discloses members of a trusted group sending junk mail reports to a trusted server. However, Nielsen does not explicitly disclose:

- a trust factor associated with each user.

Rounthwaite discloses a feedback loop for spam prevention system and method tat facilitate classifying items in connection with spam prevention in server and/or client based architectures comprising:

Art Unit: 2157

- a trust factor associated with each user (paragraph 0035, lines 1-9 and paragraph 0085; Rounthwaite discloses a trust level for each user to determine the user trustworthiness when classifying messages as spam or not).

Therefore, it would have been obvious to one of ordinary skill in the art at the time was made to modify Nielsen by incorporating or implementing a trust level for each trusted in member within the trusted group in order to determine the user trustworthiness for the purpose of classifying email message for spam prevention.

As per claim 14, Nielsen further discloses:

- maintaining a database of email messages determined as being spam (col. 9, lines 8-35; Nielsen discloses maintaining databases in the trusted user's client computer and in the trusted group's server relating to junk e-mail).

As per claim 15, Nielsen further discloses:

- providing notifications to the community of users of email messages stored in the database and determined as being spam (col. 7, lines 50-67, col. 8, lines 1-3 and col. 13, lines 6-16; Nielsen discloses sending junk mail warning messages to the members in the trusted group regarding messages in the database that are considered to be junk mail).

As per claim 16, Nielsen discloses:

- wherein each notification is in response to a request received from a user in the community for an indication on whether an identified message is spam (col. 7, lines 7, lines 50-67, col. 8, lines 1-3 and col. 13, lines 6-16; Nielsen discloses receiving junk mail report from members within a trusted group in which the report indicates if a message is spam. After determining if the message is spam,

the trusted group server sends a junk mail warning messages to the members in the trusted group regarding messages in the database that are considered to be junk mail).

As per claim 17, Nielsen discloses:

- wherein each report comprises at least one signature based on a content of the email message (col. 11, lines 61-67, col. 12, lines 37-45 and col. 13, lines 38-58; Nielsen discloses a trusted group server receiving a junk mail report from members in the trusted group in which the server determines if the digital signature in the message can be authenticated if not then the message is discarded).

As per claim 18, Nielsen discloses the claimed invention substantially as claims discussed above.

However, Nielsen does not explicitly disclose:

- wherein the trust factor is based on an indication of how accurately previous reports sent by the user identified email messages as spam.

Rounthwaite discloses a feedback loop for spam prevention system and method tat facilitate classifying items in connection with spam prevention in server and/or client based architectures comprising:

- wherein the trust factor is based on an indication of how accurately previous reports sent by the user identified email messages as spam (paragraph 0035, lines 1-9 and paragraph 0085; Rounthwaite discloses a trust level for each user to determine the user trustworthiness when classifying messages as spam or not

Art Unit: 2157

based on analyzing the number of contradictions, the number of changed minds, etc.).

Therefore, it would have been obvious to one of ordinary skill in the art at the time was made to modify Nielsen by incorporating or implementing a trust level for each trusted in member within the trusted group in order to determine the user trustworthiness for the purpose of classifying email message for spam prevention.

### *Conclusion*

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LaShonda T. Jacobs whose telephone number is 571-272-4004. The examiner can normally be reached on 8:30 A.M.-5:00 P.M..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on 571-272-4001. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.

Art Unit: 2157

For more information about the PAIR system, see <http://pair-direct.uspto.gov>.

Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
